

The Kibbutz Industries Association (KIA) was established in 1962 and is part of the Manufacturers Association of Israel. It represents more than 250 Companies, industries and start-ups of the kibbutzim, cooperative rural communities, and regional industrial corporates throughout Israel. These companies lead in the medical, defense & Automotive, building materials, chemical, metal, electrical sectors while others excel in advanced agricultural and food technology solutions.

KIA's activities are focused on three main pillars: Innovation and entrepreneurship, global markets, and human resource development. Our main goal is to create business opportunities and connect the industry to a prosperous future.

Our Agri-tech solutions have been implemented in diverse agriculture fields in Israel as well as worldwide, supporting Sustainability and additional global goals like water purification, development of infrastructure and fighting desertification and world hunger. "Agritech" Israel is a special NGO established in 1985 supporting above 600 Israeli agro-technology and water-related companies by exposing their achievements in international exhibitions, conventions, and special marketing and demonstration events.

Innovation and cutting-edge technologies are utilized and implemented into the supply chain and production floor, creating vibrant and successful companies, which most work in a cooperative business model.
